

ZEROING TARGET - 9×19mm Parabellum

Zero: 25 m · Federal American Eagle 115 gr FMJ · BC(G1) 0.129 · muzzle 360 m/s · sight height 25 mm

1 square = 1 MOA at 25 m = 7.27 mm (24 x 18 squares)

Black centre = 2 in (50.8 mm)

Point of impact relative to point of aim - zeroed at 25 m

Distance	Drop (mm)	MOA	Velocity (m/s)	Energy (J)
7 m	-13	6.3	352	463
15 m	-4	0.9	345	443
25 m	0	0.0	336	421
50 m	-30	2.0	318	376

Negative drop = impact below point of aim. Computed by the BallisticEngine G1 point-mass model for the load named above, at 15 °C, sea level, 1013 hPa, no wind. A different bullet weight or a different barrel changes these numbers.
